

Nitrate Control Program

PUBLIC MEETING

The future of water management is underway. The Nitrate Control Program (NCP) is striving to implement an Early Action Plan in identifying areas that are contaminated and dealing with nitrate-related issues. The NCP is investigating feasible drinking water solutions for those that are impacted by this contaminant. The Chowchilla Management Zone is looking to present to the public – virtually and by dial-in – where drinking water is being affected and who should be involved.

The purpose of this meeting is to learn more about the NCP program, what the objectives, goals of the program are, and how stakeholders – like you – can participate. Discussion will be focused on what the currently released draft plan includes and what can be done to improve it to meet the needs of the impacted area. Your comments are vital to helping address water quality issues in your community.
