

1. Does the county identify and point out areas to go to under the initial run at control/and follow up run?

The County Staff has a list of areas that are currently identified for rodent control needs (latitude and longitude). This information will be provided to the contractor. Other areas would need to be determined by the contractor and pointed out for further investigation.

2. This RFP is only for June 1st till August 31st, after that the county will decide if this can be a year round contract?

The initial contract would start once the contract is agreed to and Board signatures can be acquired. We are anticipating the beginning of May 2021. This contract would be for the 2021 season, which ends near the end of September. Please see page three (3) of the RFP for the anticipated timeline. This could become a year-round contract based on the need for services and waterway restrictions.
